

Invite the principal to the remote gala

Dear Principal!

Some time ago, we were given an important and exciting mission! We set out on an interesting journey with the Kip crew, and went to the planet Kipinoi to build machines of the future. Tuka, Waaba, Maco and Soca have been leading us through an inspiring technology-oriented learning process. We each built our very own machine of the future at home using recycled materials. We needed some help from our family members, too.

In every module, the Kip crew gave us instructions on what kind of materials we needed to find at home. We were also given a little bit of homework relating to the theme. We did a great job! This collaborative learning package focuses on technology, the natural sciences, mathematics, sustainable development and interpersonal skills, and is designed to prepare us for important 21st-century tasks. The Kip crew taught us a lot about teamwork. The characters have completely different personalities and their own strengths and weaknesses. We learnt that different kinds of people can form a very close-knit and effective team!

We wanted to build moving machines in small teams, but that wasn't possible this time, as we had to do all our work remotely. However, we still benefited greatly from the collaborative learning process, as we did all our planning and brainstorming together. Our journey is now culminating in a grand Gala, at which we'll present our machines. We'd like to invite you, our school's principal, to this important event. We've also been documenting our shared journey and learning process. You'll hear more about that at the Gala, too.

You are warmly welcome to our Gala!

Best wishes,
